## FEATURES

- ✓ Covers up to 6,000 sq ft
- ✓ Annual & perennial wildflowers
- ✓ 325,000 seeds per pound
- ✓ Coated with pinnacle clay for better germination

## A mixture of pollinator friendly annuals and perennials tailored to the West

Western Wildflower Seed Mix is a mix of annuals and perennials tailored to the western United States. This mix ensures vibrant color throughout the growing season and emphasizes native species that naturally thrive in the region, along with carefully selected non-invasive, non-native varieties that are well-adapted to local conditions.

**Enhanced germination and establishment rates by up to 50% with Pinnacle seed coating.**

**Recommended Seed Rates:**  
**1 lb. Cotton Bag: 2,000–6,000 sq. ft.**  
**3 oz. Pouch: 200–500 sq. ft.**

This versatile mix is perfect for garden beds, borders, planter boxes, and other maintained spaces, and it can also be broadcast over larger areas for a more natural, meadow-like appearance. It's well-suited for western states below 7,000 feet in elevation—including CO, UT, NV, ID, WY, KS, NE, MT, ND, SD, OR, and eastern WA. Our wildflower seed mixes feature Pinnacle seed coating from Summit Seed Coating, known for enhancing germination and establishment rates by up to 50%. Tests show that coated seeds consistently outperform uncoated ones, resulting in quicker growth, better coverage, and more efficient seed use—saving you money in the long run.

**Available in 3 oz. pouches or 1 lb cotton bags**
