

Buffalograss

SUNDANCER

Hottest Buffalograss Under the Sun

**Introducing Sundancer,
the most advanced Turf-Type
Buffalograss available to the
turf industry today!**

Developed through a cooperative effort between the Native Turf Group and University of Nebraska, Lincoln; Sundancer fills the demand for a warm season turf with accelerated establishment and superior turf quality from seed. Sundancer is widely adapted and has proven itself a **PREMIUM** turf, suited to a variety of diverse environments.

In a three year trial at locations in AZ, CO, KS, NE, NM, UT, VA, and WA; Sundancer ranked first in all categories. Side by side comparisons with other commercially available varieties showed Sundancer a step above the rest.

- **Faster Establishment from Seed (Similar to KY Bluegrass)**
- **Dark Green Color**
- **Disease & Insect Resistance**
- **Early Spring Green Up & Fall Color Retention**
- **Enhanced Density and Fine Leaf Texture**
- **Broad Adaption**
- **Lower Plant Height**

While Sundancer is improved in these areas, it retains the core low maintenance characteristics that make Buffalograss desirable.

- **Extreme Drought Tolerance**
- **Low Water & Nitrogen Usage**
- **Winter Hardiness**
- **Lateral Spread by Stolons**
- **Low Growth Habit**

Sundancer should be planted in locations receiving at least 6-8 hours of direct sunlight each day. Clay based or heavy soils are preferred. Sandy soils may require amendments to aid establishment. Results may vary over 5,000 ft. elevations. See pages 11-12 of this catalog for more information on establishment and management of Turf-Type Buffalograss.

Area of Adaptation for Sundancer Buffalograss

**Use Sundancer for residential lawns, commercial sites,
parks and rec areas, golf courses, medians, or anywhere
an attractive low maintenance turf is required!**

Sundancer™ Buffalograss
