

PRODUCT SPEC SHEET

Ranger II alfalfa was specifically developed as an improvement on the original Ranger variety, building on its proven performance while adapting it to meet the needs of modern growers. It excels in both irrigated and dryland environments, spanning from the northern plains to the winter-hardy and moderately winter-hardy intermountain regions of the western United States.

This variety maintains the exceptional drought tolerance that made Ranger a trusted choice for decades, but it also incorporates enhanced resistance to key alfalfa diseases. These improvements translate into longer stand life, greater forage yields, and consistent productivity year after year.

Ranger II demonstrates remarkable adaptability to a broader range of soil conditions, making it a versatile option for growers facing variable field environments.

PLANTING RATES

DRILLED: 15 - 20 LBS PER ACRE

BROADCAST: 20 - 30 LBS PER ACRE

SOIL & MOISTURE

Adaptable to a wide range of soil types and conditions. For maximum yield and quality results we recommend irrigation and good fertility with your trusted agronomist.

- ▶ Developed directly from Ranger
- ▶ Excellent drought tolerance
- ▶ Winterhardy
- ▶ Superior forage yields than Ranger
- ▶ Increased disease resistance
- ▶ Dryland and irrigated applications
- ▶ Certified seed production

PRODUCT SPECIFICATIONS

DEVELOPED DIRECTLY FROM RANGER

Ranger II alfalfa was developed from Ranger to maintain its drought tolerance and winter hardiness while improving disease resistance, stand longevity, and adaptability to more growing conditions.

EXCELLENT DROUGHT TOLERANCE

Ranger II offers excellent drought tolerance, maintaining productivity and stand health even under limited moisture conditions. It needs a minimum annual precipitation of 12 inches.

WINTER HARDY AND PERSISTENT

Provides strong winter hardiness allowing it to survive harsh winters and resume growth quickly in spring from the northern plains to the intermountain areas of the West.

IMPROVED DISEASE RESISTANCE

Ranger II alfalfa has improved resistance to bacterial wilt, Verticillium wilt, and Phytophthora root rot, helping protect yields and extend stand life.

DISEASE / INSECT / NEMATODE RATINGS

Bacterial Wilt	Moderate Resistant (MR)
Fusarium Wilt	Moderate Resistant (MR)
Verticillium Wilt	Moderate Resistant (MR)
Anthracnose-Race 1	Resistant (R)
Phytophthora Root Rot	Moderate Resistant (MR)
Stem Nematode	Resistant (R)
