

SEED COATINGS

ALL-VANTAGE®

Gives your seed every advantage possible!

ALL-VANTAGE® is an advanced seed coating system for superior application of legume inoculants, fungicides, seed coloring, nutrient packages and other seed enhancements to promote better stand establishment of legumes, grasses, brassicas and other species.

The **ALL-VANTAGE®** coating system begins with a specially formulated polymer, Adhere 108®, that acts as a superior binding agent to provide consistent, uniform coverage of the seed. The special binding properties of Adhere 108® reduces dust-off of the coated seed and is completely safe to handle and transport. Coatings are available in the industry standards of 8-10%, 34% and 50%. Custom coatings are also available.

NUTRI-START® is a specially designed micronutrient package that contains essential micronutrients to aid in germination, emergence and promote early root growth.

AquaBond™ is a revolutionary new seed enhancement that is both plant and environmentally friendly. **AquaBond™** water absorbing polymer holds water that would normally be lost to percolation or evaporation from the soil and then releases the water back to the seed as needed, allowing the seed to germinate and grow during dry spells until additional moisture is received.
