# ‘MT CASH’ FORAGE WINTER WHEAT

PRODUCT SPEC SHEET

## OVERVIEW

‘MT Cash’ is an awnletted* forage hard red winter wheat developed by Montana State University. It was bred to match the forage yield and quality of ‘Willow Creek’ wheat, and is the replacement for ‘Ray’. MT Cash is an excellent dual-purpose wheat with high forage tonnage and high seed yield for milling. It resists lodging and has sturdy straw. It is winter hardy and stripe rust resistant. MT Cash heads about seven days earlier than Willow Creek, giving you an earlier opportunity to harvest. If Willow Creek worked well for you, MT Cash is the natural next choice.

*In normal conditions MT Cash expresses a short, dwarf beard or ‘spike’ on the last 3-4 seed lemmas at the top of the seed head. In ideal conditions the expression is diminished. Stress will result in stronger expression.

## PRODUCT BENEFITS

- Developed for high forage yield
- Good winter hardiness
- Strong straw for better standability
- Resistant to stripe rust
- Heads approx. seven days earlier than Willow Creek
- Awnletted hard red winter wheat

*Photo of ATV: MT Cache (right) is a new Hard Red Winter forage wheat bred for both high seed yield and excellent forage quality and tonnage.*
